Art Unit: 2632

1. The patent number associated with parent application 09/964,487 (US 6,710,711) should be inserted in paragraph 0001 of the specification, in the appropriate place.

2. Claims 3-5 and 16-19 are objected to under 37 CFR 1.75(a) for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, line 2, claim 16, line 10 and claim 18, line 10, "each periodic simulation" lacks antecedent basis (note the modified language of claims 1, 16 and 18 compared with the corresponding claims in the patent issued from the parent application).

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-16 and 18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 of U.S. Patent No. 6,710,711. Although the conflicting claims are not identical, they are not patentably distinct from each other because regardless of whether the simulations are "periodic" (in the claims of the patent) or carried out continuously (or according to some other time-based criterion), the overall result of "identifying the presence of an attack on an area by one or more nuclear, chemical or biological agents" is achieved with substantially the same degree of reliability.

5. No art rejections (under 35 U.S.C. 102/103) of claims 1-19 are considered appropriate at this time.

Art Unit: 2632

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Peterson et al (US 6496110) was cited in the parent application.
